

# MATERIALS CATALOG

With over 70 finishes to choose from, including wood, stone, acrylics, HPL, metal and glass, OscarTek® offers a finish for virtually every taste and every design. Of course, in the rare instance when a different finish is required, simply provide us your material specifications and our artisans can custom tailor a solution for your unique needs.

# Cleaning & Care

---

LAMINATED WOOD NATURAL WOODS It is recommended to clean with a microfiber cloth, water and detergent with neutral PH (avoid chemicals).

---

STONES It is recommended to clean with a microfiber cloth, tepid water and detergent with neutral PH (avoid chemicals).

---

GRES For the ordinary cleaning use a damp cloth and a small amount of PH neutral detergent or a non-aggressive degreaser.

---

ACRYLICS For the ordinary cleaning use a damp cloth with a light abrasive cream cleaner, and rub it in a circular motion.

---

HPL FENIX it is recommended to clean with a microfiber cloth, water and detergent with neutral PH (avoid chemicals).

---

QUARTZ **Polished Engineering Stone/ Brushed engineering stone** - For the routine cleaning of the SM QUARTZ® surfaces use a damp cloth and a small amount of PH neutral or slightly acidic detergent.

---

**Quartz Grain Stone Italiana** - For the routine cleaning: wet the countertop surface uniformly with the detergent, rub gently with the soft side of a yellow/green sponge, rinse thoroughly and dry with a cloth.

---

ELECTROPLATED SHEET METAL It is recommended to clean with a microfiber cloth.

---

GLASSES It is recommended to clean with a microfiber cloth, water and detergent with neutral PH (avoid chemicals).

---

---

## METAL SHEET

**Natural brass burnished with acid Acid-burnished brass sheet** (zinc-copper, LO12NBA alloy) is a surface subject to natural, changeable and continuous oxidation over time (not suitable for food contact). The color and opacity may also change over time due to the lamination of the brass alloy, giving it a "vintage" look.

---

**Liquid aged satin natural brass** For ordinary cleaning we recommend the use of a microfiber cloth with neutral PH detergent. We recommend, if necessary, or as a conservative treatment, the application of beeswax with a wool cloth (under the supervision of specialized personnel). In case of containers and air shipments of products in brass sheet (zinc-copper alloy), both with liquid treatment and acid burnishing, it is to be considered the possibility of anomalous oxidation problems, in the form of dark bronze stains, which cannot be solved.

---

**Powder-coated sheet metal** For the cleaning, it is recommended to clean with a microfiber cloth.

---

**Stainless steel sheet** For the ordinary cleaning, use a damp cloth and water.

---

**Natural and micro-perforated sheet metal** For the cleaning, it is recommended to clean with a microfiber cloth.

---

**Electroplated sheet** For routine cleaning use a damp cloth and lukewarm water, wiping gently.

---
